

DEVET BANK

INSTRUMENTS IN NFT'S

DEVETBANK

NFT FINANCIAL INSTRUMENT

Abstract

DevetBank is a financial instrument created to solve the problems of economic volatility of blockchain-based assets, taking as a profitability engine a release algorithm and a commitment to a programmed increase in sales orders, this financial instrument seeks to be an asset stable, free from speculation and with a firm intention to protect the genuine operation in the supply and demand markets.

9 years later

The same for the same

9 years later they are the big industries of mining and commercialization of cryptocurrencies led by people with a lot of money and power, who own more than 90% of the cryptocurrencies that are commercialized, once again the rich are richer and the poor are poorer. Once again humanity dyes mud again, a new and renewed time that Satoshi Nakamoto gave us with BLOCKCHAIN technology.

9 months later

Chimeras without technological souls

The speculation of the year 2017 broke the barriers of trust, increasing the thirst for money, playing with abrupt entries and exits from the market to make currencies go down and up, turning them into a chimera without technological value, without an innovative soul, without one more reason. beyond the desire for power and devaluative and evaluative games where those who always lose are those with less purchasing power. **9 días después**

Value at time

That is why before this becomes a global financial catastrophe, 9 years after the Satoshi Nakamoto Group offered us what for us is still the opportunity for a new humanity, we have decided to stay out of the purely decentralized market, supporting our digital assets in physical assets, being independent, autonomous, neat, consistent with what an NFT strategy should really be, so it is a pleasure for us to present DevetBank (The instrument that gives real value to time)

The correct time

DevetBank

It was immensely necessary for a digital asset to emerge as free as time, but that does not tie the human being and make him a slave to time, or power, or the economy itself, an immutable asset, an asset that paradoxically does not depend on his commercial value or volume to increase its price, DevetBank only depends on time, its growth is organized, synchronous, balanced, mathematically perfect, every 9 days, every 9 months, every 9 years.

Introduction

When in January 2009 Satoshi Nakamoto Group unveiled an incorruptible protocol based on trust, many of us celebrated, understood that the world as we know it financially could change, that the great capital spheres could fall, to give opportunities to eliminate poverty gradually, we fully believed and trusted in this revolution, without a doubt the industrial evolution was coming not only of the internet but also of humanity. However, a stain of interests, power and speculation is flooding what exactly 9 years ago filled us with smiles.

A world based on a decentralized protocol offers immense freedoms for crypto asset traders, transparent transactions eliminate the trust component between people, consensus protocols give us tremendous security regarding the genuineness of our accounts and the block system gives us guarantees a complete absence of corruption, all this is wonderful, but as human beings we always find a weak point in a technology that is wonderful in principle, we find the genesis of the system's vulnerability...the market.

The technology is wonderful, transparent and incorruptible, but what happens when the process ends and the assets go through the output of the algorithm?

It happens that it reaches the real world, a world that has not yet evolved enough for this economy, a world where we are experiencing the most important economic transition in several centuries, where speculation, lack of honesty and individual interests cause great blemish on a system that, until then, was a harmony of precision and reliability.

The NFTs appear as a property asset, an evolution of the "Proof of Property" and either as an artistic, tokenomic or gamification element, over time human creativity has been in charge of polishing strategies for different economic uses and that is where Enter our project.

In this real world, crypto assets must go through a "conversion" process, a crypto-physical translation at the hands of a market governed by people with sufficient economic capacity to corrupt the system.

DevetBank has the potential to solve the problems of a corrupt market, provide stability for years and adapt to the real economic world immediately. This document supports the economic, social and functional argument of a project that provides confidence and stability to the world of NFTs.

Components and benefits of the Polygon ecosystem – Rarible

DevetBank is a 2.0 platform that will serve as a commercial portfolio in the first stage of the project, the NFT's will be hosted in the Rarible decentralized Marketplace, one of the largest platforms of its kind and one of the most evolved to date, a structure fast and reliable that hosts our non-fungible tokens, giving them great value and rapid commercial diffusion.

Blockchain network architectures represent decentralized databases, which, in contrast to traditional databases, used for years, offer unique advantages:

- **Speed:** Due to the technological nature of the Polygon blockchain architecture, transfers occur almost instantaneously, without waiting and with a capacity of 2,000 transactions per minute, which provides our system with more than robust support for the demands of the market.
- **Immutability:** the nature of chained blocks makes it impossible for any transaction to be reversed or even edited, no one can interfere with system processes.
- **Transparency:** Ethereum's blockchain structure makes it possible to track the movement of funds between accounts, this together with the privacy of the wallets, provides a guarantee of protection for any user in the ecosystem.

On the holding and valuation of our NFTs

DevetBank presents itself as a decentralized asset custody platform, maintaining their management and providing them with an economic valuation at the same time that their owners can obtain profits thanks to our Prometehum technology that validates their profits through "Proof of time", nothing Better than time to prove the value of something.

The sale will be made through USDT, specifically on its smart contract on the Tronx (TRX) network.

The supply will be 9999 NFTs, which will be released in orders of 250 until their total sale is complete.

The first order will be released for a value of 1250 USDT, however subsequent orders will be released at the same value as the highest priced nft offered on the P2P market.

No sell order in the P2P market can be bid at more than one X10 of its face value, in order to control excessive speculation.

The proceeds will be deposited in a reward pool that will deliver 3% monthly on the net value of each NFT to all active holders following the formula:

$$T = 1.000$$

$$L1 = (V*2)/100, L2 = (V*2)/100, L3 = (V*2)/100, L4, L5...$$

Where T is the total number of NFTs issued, V is the liquid purchase value of each NFT in our Marketplace and L1, L2, L3... Are the monthly value releases to asset holders.

A total of 80 monthly releases will be made, all in accordance with the financial strategy desired by the project and will apply directly to the prices set by our increase algorithm in the Marketplace, the resale price or subsequent commercialization of the NFT does not apply to the receipt of capital releases, that is, each NFT receives fixed profits based on the purchase price in our Marketplace.

About the increase in assets DevetBank

As previously discussed, DevetBank represents a centralized custody of decentralized assets, in this case NFTs, which tries to solve market speculation problems and grant fixed payments to users, turning the ecosystem into a solid and unique financial instrument in the world. crypto world, for this, the profits will be obtained by investing in the NFTs of our collection, applying fixed increments to all holders in time constants of 9 hours and 9 months according to the following table:

9 HOURS	9 MONTHS
0.0375%	27%

(Values subject to financial study by the project administrators)

In this way, NFT holders will obtain a fixed profit in USDT tokens and their assets will rise in price over time within DevetBank's centralized Marketplace every 9 months, period after which the increase is added to the liquid price of the NFT.

The increase algorithm will then apply value increases on our centralized platform every 9 hours and every 9 days until completing 9 months, at which time the balance will be added to the NFT's liquid value, making it earn more each cycle.

Capital contributions

Our asset custody represents an attractive investment for all participants in the blockchain environment, stability is the main support of DevetBank, emerging as one of the main centralized platforms with stable sales volume over time, at the time of creation of this project, Important investors could show their interest in the purchase and mass adoption of Devet, as a monetary exchange system on their platforms or as a safe haven asset, attracted by the availability of NFTs at a stable price.

About the prices

DevetBank seeks to grant a fixed price to its NFTs, based on the creation of collections (value subject to change depending on the economic study prior to launch), its value will be tied to our value increase algorithm and its ownership will always be restricted to members of our platform.

Performance and scalability

Our assets are traded in the USDT liquid token (TRONX network), one of the fastest and most commercial currently, due to its technological component and popularity among cryptocurrency traders, NFT assets use the Polygon network, a second layer network of Ether, with low commissions and future updates that will make it one of the most efficient, perhaps becoming the most used worldwide.

About social responsibility

With its feet on the ground, located chronologically in a real world, which evolves every day, changing and converging on new practices in all areas, the DevetBank project advocates for a participatory, decentralized, transparent economy, but above all fair and stable. Our responsibility towards society is to work for the implementation of an economy based on Blockchain, but clean, free of speculation and manipulation by third parties, establishing a tradable token with guarantees of availability of coins at fixed prices and being the only one that offers notarial legal guarantees as it is a real financial instrument.

Ending

Devet Bank, more than a Marketplace, is a project focused on changing the way people see NFT investments in the new economic markets, Devet Bank aims to turn a useless image of verified ownership into a real financial instrument.
